Chapter 1

1.1 Random Examples

Limit of Sequence in Let $\{s_n\}$ be a sequence in \mathbb{R} . We say

$$\lim_{n \rightarrow \infty} s_n = s$$

where $s \in \mathbb{R}$ if \forall real numbers $\epsilon > 0 \exists$ natural number N such that for $n > N$

$$s - \epsilon < s_n < s + \epsilon \text{ i.e. } |s - s_n| < \epsilon$$

Is the set $x\text{-axis} \setminus \{\text{Origin}\}$ a closed set We have to take its complement and check whether that set is a open set i.e. if it is a union of open balls We will do topology in Normed Linear Space (Mainly \mathbb{R}^n and occasionally \mathbb{C}^n) using the language of Metric Space Topology Topology is cool Open Set and Close

Open Set: $\bullet \phi$
 $\bullet \bigcup_{x \in X} B_r(x)$ (Any $r > 0$ will do)
Set $\bullet B_r(x)$ is open If $x \in$ open set V then \exists
Closed Set: $\bullet X, \phi$
 $\bullet \overline{B_r(x)}$
 $x\text{-axis} \cup y\text{-axis}$

$\delta > 0$ such that $B_\delta(x) \subset V$ By openness of V , $x \in B_r(u) \subset V$

[red] (0,0) circle [x radius=3.5cm, y radius=2cm] ; (3,1.6) node[red] V ; [blue] (1,0) circle (1.45cm) ; [blue] (1,0) circle (1pt) node[anchor=north] u ; (2.9,0.4) node[blue] $B_r(u)$; [green!40!black] (1.7,0) circle (0.5cm) node [yshift=0.7cm] $B_\delta(x)$; [green!40!black] (1.7,0) circle (1pt) node[anchor=west] x ;

Given $x \in B_r(u) \subset V$, we want $\delta > 0$ such that $x \in B_\delta(x) \subset B_r(u) \subset V$. Let $d = d(u, x)$. Choose δ such that $d + \delta < r$ (e.g. $\delta < \frac{r-d}{2}$)

If $y \in B_\delta(x)$ we will be done by showing that $d(u, y) < r$ but

$$d(u, y) \leq d(u, x) + d(x, y) < d + \delta < r$$

By the result of the proof, we can then show... Suppose $\vec{v}_1, \dots, \vec{v}_n \in [n]$ is subspace of \mathbb{R}^n . $1 + 1 = 2$.

1.2 Random

Normed Linear Space and Norm $\|\cdot\|$ Let V be a vector space over $(\mathbb{R}, +, \cdot)$ (or $(\mathbb{C}, +, \cdot)$). A norm on V is function $\|\cdot\| : V \rightarrow_{\geq 0}$ satisfying

$$[\text{label}=\mathbf{0}] \|x\| = 0 \iff x = 0 \quad \forall x \in V \quad \|\lambda x\| = |\lambda| \|x\| \quad \forall \lambda \in (\text{or } \mathbb{R}, \mathbb{C}), x \in V \quad \|x + y\| \leq \|x\| + \|y\| \quad \forall x, y \in V \quad (\text{Triangle Inequality/Subadditivity})$$

And V is called a normed linear space.

- Same definition works with V a vector space over $(\mathbb{C}, +, \cdot)$ (again $\|\cdot\| \rightarrow_{\geq 0}$) where $??$ becomes $\|\lambda x\| = |\lambda| \|x\| \quad \forall \lambda \in \mathbb{C}, x \in V$, where for $\lambda = a + ib$, $|\lambda| = \sqrt{a^2 + b^2}$
 p -Norm $V = {}^m, p \in_{\geq 0}$. Define for $x = (x_1, x_2, \dots, x_m) \in {}^m$

$$\|x\|_p = \left(|x_1|^p + |x_2|^p + \dots + |x_m|^p \right)^{\frac{1}{p}}$$

(In school $p = 2$) **Special Case** $p = 1$: $\|x\|_1 = |x_1| + |x_2| + \dots + |x_m|$ is clearly a norm by usual triangle inequality.

Special Case $p \rightarrow \infty$ (m **with** $\|\cdot\|_{\infty}$): $\|x\|_{\infty} = \max\{|x_1|, |x_2|, \dots, |x_m|\}$
For $m = 1$ these p -norms are nothing but $|x|$. Now exercise Prove that triangle inequality is true if $p \geq 1$ for p -norms. (What goes wrong for $p < 1$?) **For Property ?? for norm-2**

When field is :

We have to show $\sum_i (x_i + y_i)^2 \leq \left(\sqrt{\sum_i x_i^2} + \sqrt{\sum_i y_i^2} \right)^2$
 $\sum_i (x_i^2 + 2x_i y_i + y_i^2) \leq \sum_i x_i^2 + 2\sqrt{[\sum_i x_i^2][\sum_i y_i^2]} + \sum_i y_i^2$
 $[\sum_i x_i y_i]^2 \leq [\sum_i x_i^2][\sum_i y_i^2]$ So in other words prove $\langle x, y \rangle^2 \leq \langle x, x \rangle \langle y, y \rangle$ where

$$\langle x, y \rangle = \sum_i x_i y_i$$

$$\bullet \|x\|^2 = \langle x, x \rangle$$

$$\bullet \langle x, y \rangle = \langle y, x \rangle$$

- $\langle \cdot, \cdot \rangle$ is $-$ linear in each slot i.e. $\langle rx + x', y \rangle = r\langle x, y \rangle + \langle x', y \rangle$ and similarly for second slot Here in $\langle x, y \rangle$ x is in first slot and y is in second slot.

Now the statement is just the Cauchy-Schwartz Inequality. For proof

$$\langle x, y \rangle^2 \leq \langle x, x \rangle \langle y, y \rangle$$

expand everything of $\langle x - \lambda y, x - \lambda y \rangle$ which is going to give a quadratic equation in variable λ $\langle x - \lambda y, x - \lambda y \rangle = \langle x, x - \lambda y \rangle - \lambda \langle y, x - \lambda y \rangle$
 $= \langle x, x \rangle - \lambda \langle x, y \rangle - \lambda \langle y, x \rangle + \lambda^2 \langle y, y \rangle$
 $= \langle x, x \rangle - 2\lambda \langle x, y \rangle + \lambda^2 \langle y, y \rangle$ Now unless $x = \lambda y$ we have $\langle x - \lambda y, x - \lambda y \rangle > 0$
Hence the quadratic equation has no root therefore the discriminant is greater than zero.

When field is :

Modify the definition by

$$\langle x, y \rangle = \sum_i \overline{x_i} y_i$$

Then we still have $\langle x, x \rangle \geq 0$

1.3 Algorithms

[H] This is some input This is some output This is a comment some code here

$x \leftarrow 0$ $y \leftarrow 0$ $x > 5$ x is greater than 5 *This is also a comment x is less than
or equal to 5 y in 0..5 $y \leftarrow y + 1$ y in 0..5 $y \leftarrow y - 1$ $x > 5$ $x \leftarrow x - 1$
Return something here what
